Advanced DIRCM protection for rotary and turbo-prop fixed-wing aircraft

Advanced DIRCM protection for rotary and turbo-prop fixed-wing aircraft

Helicopters and turbo-prop fixed-wing cargo aircraft face mounting threats from heat-seeking, ground-to-air missiles. These shoulder-fired missiles (MANPADS) are easily transportable and extremely lethal. To counter this threat, IN_MINI_CMS, an advanced Directed Infra-Red Counter Measure (DIRCM) system that is optimized to protect such platforms.

Comprehensive level of protection

Built on years of proven experience in a military environment, this DIRCM solution provides fixed and rotary-wing aircraft with superior defense against multiple missile threats. The solution can also be integrated with various Missile Warning Systems (MWS) for reliable and affordable protection.

Advanced DIRCM protection for rotary and turbo-prop fixed-wing aircraft

Compact and Lightweight

- Powerful fiber laser for efficient operation
- Sealed mirror gimbal for high reliability
- Thermal camera for accurate acquisition and tracking
- Hyper-hemispherical dome for maximum coverage

Main Features

- Compact size and weight, single LRU
- High reliability
- Rapid response time
- Automatic internal boresight
- Open architecture for MWS interface
